

VERSATILE IMAGINATIONS
Since 2003

www.idea.az

IDEA is an international company specializing in the manufacturing of a wide range of modern urban & garden furniture products for public areas, special designed wooden and metal constructions, as well as architectural forms and design elements for public infrastructure. We are convinced that public areas should be designed in a way, that will inspire the present and future generations. On that end, we always strive to incorporate clever design, creativity, functionality, and amenity into our works. We are always in search of new challenges, to achieve more decisive results, whilst being even more creative and effective.

IDEA thinks globally, acts locally.

VERSATILE IMAGINATIONS
Since 2003

GLUE-LAMINATION

Glue-laminated timber (glulam) is a structurally engineered wood product commonly used for beams and columns. When glued with industrial adhesives, this type of wood is highly durable and moisture-resistant, capable of generating large pieces and unique shapes. Glulam is stronger than steel at comparable weights. That makes glulam a cost-effective choice for long structural spans and tall columns with minimal need for additional support.

HOT-DIP GALVANIZING

All steel components used by IDEA are hot-dip galvanized in a liquid zinc bath at 449 °C. If the surface is damaged, hot-dipped galvanized products repair themselves through zinc contracting and forming a new coating in the damaged area. Zinc is a more active metal in comparison to steel. This is a unique characteristic for galvanizing, which means when a galvanized coating is damaged and steel is exposed to the atmosphere, zinc can continue to protect steel through galvanic corrosion.

IMPREGNATION OF WOOD

The natural beauty of wood is beautiful, but not eternal. If you want the wooden structure in your project or building to last for centuries, then it needs impregnation - a process in which moisture is removed, the pores open, and under the pressure of 12-atmosphere, the "TANALITH E" antiseptic is pushed so that bacteria cannot possibly get inside the wood. Wood can be rot-resistant with proper care; however, after such an appeal, there is no turning back! This will ensure durability both outside and inside as termites love to chew through unprotected wood.

POWDER COATING

The powder coating process offers several advantages over conventional liquid coating methods, including increased durability, capabilities for more specialized finishes, and less environmental impact. In addition, powder-coated products are more resistant to diminished coating quality as a result of impact, moisture, chemicals, ultraviolet light, and other extreme weather conditions. In turn, this reduces the risk of scratches, chipping, abrasions, corrosion, fading, and other wear issues.

The products featured in this catalogue are manufactured from the following materials:
